## PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience in Java, Spring Boot, REST APIs, and enterprise integrations. Contributions span file-transfer reliability, secure cloud asset delivery, database migration, automated testing, and end-to-end connector releases.

## TECHNICAL SKILLS

**Languages and Backend:** Java (8/11/17), SQL, JavaScript, Spring Boot, REST APIs, Hibernate/JPA

**Databases and Cloud:** SQL Server, MySQL, query optimization, indexing, AWS S3, CloudFront, Rekognition

**CI/CD and Development:** GitHub Actions, Jenkins, Git, Maven, Azure DevOps (work tracking)

**Environment Validation:** Kubernetes (pod logs and preview-environment instances)

**Testing and Security:** JUnit, Mockito, JaCoCo, SonarCloud, CodeQL, Dependabot, WebdriverIO, Cucumber

**AI Development Tools:** GitHub Copilot, Cursor

## PROFESSIONAL EXPERIENCE

### Hyland Software | Developer 2

India | Jul 2025 - Present

- Enhanced the Java-based IBM Aspera connector's pause/resume behavior, transfer-state handling, interruption handling, and background processing to improve reliability for large file and folder transfers.
- Resolved hierarchical folder-download and metadata-mapping defects across LTS 2023 and LTS 2025 by reproducing upload, transfer, and download workflows and correcting S3 transient-storage configuration issues.
- Implemented RSA-signed AWS CloudFront URLs for Nuxeo asset delivery to support continued access to cached content during server downtime; replaced a Lambda-based URL-generation fallback and validated the flow in preview environments.
- Implemented and tested nuxeo-ai workflows for image tagging, image and video description generation, and video transcription.
- Built multi-module Java coverage reporting with JaCoCo, Maven aggregation, and SonarCloud; maintained above 95% coverage with unit tests and documented Java/JavaScript reporting and quality-gate guidance.
- Remediated CodeQL, Dependabot, and dependency security findings, including insecure protocols, escaping defects, workflow permission gaps, and high-severity alerts; verified fixes through pull requests and CI builds.
- Owned end-to-end connector releases across LTS 2023 and LTS 2025, including version and branch validation, sanity testing, release documentation, and troubleshooting GitHub Actions and Jenkins workflows.
- Automated and stabilized functional tests for the 3D Viewer connector using JavaScript, WebdriverIO, and Cucumber/Gherkin, improving selectors and timeout handling for rendering-dependent CI tests.

### Accenture | Java Full Stack Developer

India | Oct 2021 - Jul 2025

- Modernized Java and Spring Boot backend components to support an enterprise migration from Sybase to SQL Server, improving compatibility with the target database platform.
- Developed and maintained REST APIs and data-access functionality using Spring Boot, SQL Server, and MySQL.
- Optimized SQL queries and indexing strategies to improve data-processing efficiency and application responsiveness.

### DXC Technology | Java Full Stack Developer

India | May 2021 - Oct 2021

- Developed Spring Boot services and SQL Server data-access components for an internal tracking and task-management application; created and documented REST APIs for task-management workflows.

## CERTIFICATIONS

Microsoft Certified: Azure Developer Associate (AZ-204) | Azure Administrator Associate (AZ-104)

## EDUCATION

B.Tech in Computer Science | Amity University, Jharkhand | 2021 | CGPA: 9.2/10
